

You are invited to participate in Mars and Beyond

June 7-8, 2014, 11:00 am - 4:00 pm

Gordon Current Science & Technology Center, Museum of Science, Boston

Admission Free with Exhibit Halls entry

<http://www.mos.org/public-events/mars-and-beyond>

Mars and Beyond is a fun-filled weekend of live presentations, demonstrations on a wide variety of space topics. Visitors enjoy the chance to interact directly with real researchers, and the researchers enjoy the chance to do some excellent outreach by sharing their discoveries and passions with hundreds of people in a short time.

The Museum of Science is looking for local scientists and engineers to participate in Mars and Beyond by **leading demonstrations or activities and giving short talks**. Professionals as well as graduate and undergraduate students are welcome to participate. Topics can include any objects within our outside the Solar System, as well as the vehicles and technologies (telescopes, robots, instruments, etc.) used to explore those objects.

If you can volunteer some time to share your knowledge and enthusiasm as a guest presenter on June 7-8, or if you can suggest people to contact, **please email Julia Sable at jsable@mos.org**. Thank you!

On the Gordon Current Science and Technology Stage, the Mars Panel will answer visitors' questions about every aspect of the Red Planet, from rocks to rovers to the possibility of life.

In addition to stage presentations, the event features ongoing demonstrations and activities at tables throughout the Museum's Blue Wing. Kids and adults can satisfy their curiosity, while participating scientists can share their passion and career stories with the next generation.

By connecting visitors directly with scientists, *Mars and Beyond* helps kindle fresh appreciation for the importance of space exploration in advancing technologies and expanding knowledge.

We hope you and your colleagues will participate in this great outreach opportunity!
