

Film & Lecture Series!

SCIENCE ON SCREEN

Noted Scientists Speak on Science Related Films

The Boston area is filled with academic superstars, so why not bring them to the movies? The Coolidge Corner Theatre presents Science On Screen, where we present a feature film or documentary with a basis in science, along with exciting introductions by noted scientists in a related field.

Woody Allen's **SLEEPER**

with Brock Reeve, executive director of the Harvard Stem Cell Institute

When cryogenically preserved Miles Monroe (Woody Allen) is awakened 200 years after a hospital mishap, he discovers the future's not so bright: All women are frigid, all men are impotent, and the world is ruled by an evil dictator -- a disembodied nose. Pursued by the secret police and recruited by anti-government rebels with a plan to kidnap the dictator's proboscis before it can be cloned, Miles falls for the beautiful -- but untalented -- poet Luna (Diane Keaton). But when Miles is captured and repro-

grammed by the government (to believe he's Miss America) it's up to Luna to save Miles, lead the rebels, and cut off the nose...just to spite its face.

As wacky as the concept of resurrecting a dead dictator from his severed nose may be, there is no doubt scientists are on the cusp of very real breakthroughs in the areas of cloning and stem cell research -- hotly debated issues which may hold the key to curing a multitude of debilitating injuries and diseases.

Brock Reeve will on hand prior to the film to talk about some of the realities surrounding stem cell research and cloning. Half-brother to the late actor and stem cell advocate Christopher Reeve, the Harvard Business School graduate has garnered accolades for his work at the Harvard Stem Cell Institute since being appointed executive director last year. Previously, Mr. Reeve held managerial positions at several firms involved in healthcare, information technology, and life sciences.
