Research Technician in Bone Morphogenetic Protein Signaling Laboratory

http://www2.massgeneral.org/cvrc/faculty_yu_home.html

Dr. Paul B. Yu's laboratory is seeking a Research Assistant to work on projects focused on the molecular mechanisms of pulmonary hypertension, and the role of Bone Morphogenetic Protein (BMP) signaling. BMPs have critical roles in the regulation of vascular, cardiac and bone progenitor cells. Ongoing projects include studies of the cardiopulmonary system in genetically-modified mice, and the development of novel drug therapies for diseases caused by abnormal BMP signaling. Experience with cell biology, tissue culture, biochemical and genetic techniques is preferred.

This is a small and friendly laboratory group, and the research assistant will be supervised directly by the principal investigator. This position is laboratory-based, but will also offer opportunities to work with patients in clinical research settings. This full time position will be ideal for individuals interested in future careers in medicine or science. Salary is competitive and will depend upon experience. Hours will generally be 8:30 to 5 but may require some flexibility. BA or BS with Major in Biology and two-year commitment is preferred. If you are interested, please contact us by email at bmprii@gmail.com. Please attach a copy of your current resume including references from 3 individuals who are familiar with your qualifications with your email.
