

Life Technologies  
“Advancing the Experimental Biology Expertise”  
Massachusetts Institute of Technology (MIT)  
In association with the Biology Undergraduate Student Association (BUSA)

March 31, 2011  
7:00PM - 8:00PM  
Building 4, Room 4-231

Kyle Gee – R&D Leader, Cell Systems

Join us to learn about the “relationship between academia and industry” from the perspective of one of Life Technologies’ R&D leaders.

Food and drinks will be provided. We will be accepting resumes.

Life Even Better™ - At Life Technologies, we believe in the power of science to transform life and the power of people to make it happen. If you're ready to take charge of your impact in the world, you can do it here. We re-orient medicine toward preventing disease, unveil the wonders of personalized and regenerative medicine, ensure the safety of our food and water, deepen our understanding of human genetics, help to sustain the environment and empower a new generation of crime fighting with 21st-century forensic tools. We're a diverse group of individuals united in the privilege of shaping discovery and improving life. Created by the combination of Invitrogen Corporation and Applied Biosystems Inc. in 2008, Life Technologies (NASDAQ: LIFE) is a global biotechnology tools and solutions company dedicated to improving the human condition.
