Be a Research Assistant

at The Rockefeller University

"Rockefeller is sort of a hidden secret in the biomedical field, and my affiliation with the university very clearly impressed grad school interviewers."

– Jenny from the Darnell Lab

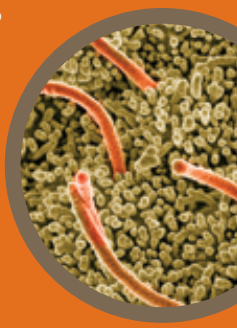
Our position

We are currently hiring students for 1-2 year research assistant positions to work closely with senior scientists and participate in challenging, complex, cutting-edge research projects.

On any given day, you will be responsible for performing molecular biology, immunology, genetics, neuroscience, biochemistry, or chemistry experiments alongside other research assistants, postdoctorals, and students. You may perform PCR, DNA extraction, DNA isolation, restriction mapping, enzyme assays, cell culture techniques, and other related scientific procedures. You will be taught the *other* essentials of science: managing a database and data analysis, using state of the art equipment, and attending and presenting at journal clubs and other scientific meetings.

After a two year period, research assistants go on to Ph.D., M.D. and combined programs, while some choose to continue on as a third year researcher to learn more.

Bachelor's in science required. We offer all the great benefits you would expect plus a generous tuition reimbursement program.



Science

Our culture

- inspiring, collaborative atmosphere
- strong social and environmental consciousness
- intellectually curious academic environment
- 14-acre campus setting in NYC

Make your mark

- be a select member of a collaborative group
- learn from the world's foremost scientists
- participate in innovative research
- work one-on-one with researchers
- master techniques and gain hands on bench skills
- attend scientific meetings, weekly lectures and special events featuring cultural innovators and thought leaders
- prepare yourself for graduate school

Follow your passion for excellence in science and join our researchers in the pursuit of science for the benefit of humanity.
