77 Avenue Louis Pasteur, NRB 7  
Boston, Massachusetts 02115*

June 10, 2017

Dear Science Advisors and Departments, Recent Graduates:

I am a physician-scientist with a basic science laboratory at Harvard Medical School and a preventive cardiologist at the Brigham and Women's Hospital in Boston. **We have an excellent available opening for a bright, talented, hard-working person to work in my laboratory** either as a **post-doctoral fellow** or as a **college graduate**, with many of the latter interested in subsequent medical or graduate school. We have also had current undergraduates take on a laboratory project for credit or as a part time position although our first priority now is to fill these full time positions.

Our laboratory does cutting edge research regarding transcriptional mechanisms underlying complex phenotypes that intersect obesity, diabetes and vascular disease. The science is exciting, broad (from cells to mice to human samples), clinically relevant, with strong collaborators, typically appears in the highest level journals, involves a very collegial group and a proven record of mentorship, all at an excellent location in the Harvard Medical School Quadrangle and associated hospitals, and based in a modern, state of the art facility. We are especially proud of how well our prior undergraduates and post-doctoral fellows have done in their subsequent careers and the chance we had to help advance their futures.

Please feel free to post this and also forward on to other departments or individuals who might be interested in such a position. This is a wonderful opportunity for the right person.

I can be contacted at **jplutzky@bwh.harvard.edu** or **857-307-1989** for any questions or to discuss the position further.

Thank you.

Sincerely,

Jorge Plutzky, MD
