

Job Title: Research Associate / Senior Research Associate – Cell Biology and Translational Oncology

<u>Location:</u> Cambridge, MA

<u>Description:</u> Transition Bio is a condensate biology technology company. We develop and

implement condensate-based drug discovery pipelines that are multiple orders of magnitude faster and more detailed than any other competitor. We do this through a highly interdisciplinary team of biologists, bioinformaticians, physicists, bioengineers, and chemists. Our small, but rapidly growing team is extremely collaborative and values a positive, open, and diverse culture. If you're excited to make an impact on an exciting, fast paced company at the ground level, then Transition Bio is for you.

Key Responsibilities:

• Maintain human cell lines and perform experimental cell culture work.

• Contribute to the design, perform, and analyze functional cell assays, such as growth, apoptosis, proliferation, migration, and transformation.

• Maintain a detailed lab notebook and organized data management.

Assist with image processing and analysis.

Provide support and collaboration with other departments at Transition Bio.

• Present data at internal meetings and prepare reports and powerpoints.

Basic Qualifications:

• B.S or M.S. in Cell/Molecular biology / Biochemistry / Genetics.

Prior biomedical research experience strong encouraged.

 Ability to organize, analyze, and deliver information in a concise, accurate and professional manner.

• Ability to manage time, multi-task, and maintain flexibility to work efficiently.

Strong written and oral communication skills.

• Experience in cell culture, microscopy, image analysis, immunofluorescence,

and various cell biological techniques.

• Experience in a collaborative, fast-paced lab environment.
