## RESEARCH TECHNICIAN

### Genes and circuits underlying sleep regulation

The Stavropoulos laboratory at the Waksman Institute and Rutgers University (<https://www.stavropouloslab.org>) is seeking a full-time research technician to perform research on the mechanisms that regulate sleep. Our studies use the fruit fly *Drosophila* to characterize genes and neuronal circuits underlying sleep-wake cycles.

Bachelor's degree in science and prior laboratory experience are required. Emphasis in molecular biology, genetics, biochemistry, or neuroscience is helpful. Candidates should be highly motivated, enthusiastic about research, and able to work both collaboratively and independently. This opportunity provides an ideal training environment for those pursuing careers in scientific research and medicine.

We prioritize applicants able to make a two-year commitment. Applicants should send a CV, transcript, and a list of references to Dr. Nicholas Stavropoulos ([stavropoulos@waksman.rutgers.edu](mailto:stavropoulos@waksman.rutgers.edu)).
