

The 2nd Boston

Symposium on the

Future of Research

October 22-24 2015, Boston University

Join us to shape the future of science!

How many graduate students and postdocs do we need and want for the academic enterprise? This meeting will focus on the labor market surrounding the biomedical workforce. We want to have a discussion on **collecting data** – what data should be collected, who by, and what for – about the academic workforce.

We also want to hear differing opinions on whether/how the structure of the academic workforce should be reformed. What barriers exist to making these/any reforms at administrative/faculty/funding agency levels?

The discussion on what data should be collected will inform a “Hack Day” in partnership with the American Society for Biochemistry and Molecular Biology (ASBMB), where projects will be proposed and participants nationwide can contribute.

Panel discussions will include: Diversity; Who are Employers Looking For (and How Many Jobs Do They Have); The Role of Early Career Researchers in Publishing; and Academic Data and the Labor Market.

Keynote

Paula Stephan

Professor of
Economics,
Georgia State
University

Speakers

- **Alberto Roca** – MinorityPostdoc.com
- **David Burgess** – Boston College and National Research Mentoring Network
- **Michael Teitelbaum** – Harvard Law School
- **Eve Marder** – Brandeis University
- **Melanie Sinche** – Harvard Law School
- **Jonathan Dinman** – University of Maryland College Park
- **Chris Pickett** – ASBMB
- **Rafael Luna** – Harvard Medical School
- **Moon Duchin** – Tufts
- And more!
