

Fireside Chats

Dr. Kevin Mills - Civetta Therapeutics

Kevin Mills, PhD
Chief Scientific Officer

**Join us on zoom for fireside chats with
biotechnology leaders and luminaries.**

The MIT Biotech Group is thrilled to welcome former MIT Biograd Dr. Kevin Mills to discuss his experiences as a scientific founder and CSO in the Boston biotech ecosystem. Dr. Mills discovered a promising therapeutic vulnerability in certain cancers as a Professor studying DNA repair mechanisms. This led to the founding of Cyteir Therapeutics, a now clinical stage biotechnology company hoping to deliver effective chemotherapies with limited side effects. After taking Cyteir to the clinical stage as founder and CSO, Dr. Mills is now serving as CSO of new start-up Civetta Therapeutics. Civetta is a company founded out of Harvard Medical School and the Broad Institute with the goal of developing drugs to target therapeutically elusive protein-protein interactions. Dr. Mills earned his PhD from MIT and did his postdoctoral research at Harvard. Join us to hear more about his career and accomplishments.
