# Leaders in Science and Engineering: The Women of MIT

**Monday and Tuesday**  
**March 28 and 29, 2011**  
**Kresge Auditorium**

This symposium will recognize individual and institutional leadership in the success of women in science and engineering. The symposium has two threads. First, progress and current challenges in encouraging gender equity will be discussed. Second, leaders in science and engineering, who are women, will address important and exciting research topics including neurological disease, space and planetary exploration, chemical synthesis, novel materials, microbes in the sea, and gravitational waves. The scientific and policy questions addressed here will be interesting to a broad audience.
