ARTIFICIAL INTELLIGENCE & ETHICS

**WEBINAR
Monday, November 16, 2020
4:00PM-5:30PM**

A panel discussion on artificial intelligence and ethics with panelists highlighting key issues and challenges. Not only social scientists and humanists are raising concerns about the realities and directions of AI; many students and faculty in engineering are also voicing hesitations about many aspects of it, something few of us have seen with previous technologies.

Listen in as the panelists raise the right issues about broader currents in computer science, AI, and society.

As an attendee, you will have the opportunity for a Q&A session once panelists have given their presentations.

This event is part of the MIT Comparative Media Studies | Writing Colloquia Series in sponsorship with the Anthropology Department, History Faculty, and STS Program.
